Subject: Microcystin toxin report for July15, 2020
To: lakezoar@gmail.com <lakezoar@gmail.com>

Here are this week's assay results for Microcystin levels at tested public beach sites. Samples were collected July 15, 2020, below or away from any floating bloom material. Results meet the assay kit's QC criteria.

The U.S. EPA and CT DPH currently advise a Microcystin threshold of 8.0 parts per billion (ppb; $\mu\text{g/L}$) for recreational waters.

Thank you for participating in the WCSU Cyanobacteria Monitoring Program.
